

Algorithmic automated analytical and trading systems

Multiply your capital with advanced technical solutions

About Us

Aurabit is an innovative investment company that brings together the expertise and experience of 70 outstanding professionals specializing in trading on financial markets, programming, data analytics, marketing, and much more.

Our primary mission is not only to manage investors' capital but also to maximize their investment opportunities.

Our main advantage, which we take pride in, is our unique combination of human intelligence and advanced artificial intelligence technologies. This allows us to significantly increase the number of transactions conducted in financial markets, and consequently, the level of profit for our investors.

We possess extensive knowledge and experience that enable us to effectively analyze markets, identify promising investment opportunities, and manage investors' portfolios with outstanding results. Our goal is to help our clients achieve financial success and ensure a stable growth of their capital.

We are proud of our team of professionals who not only have deep knowledge in the field of financial markets but also continually enhance their skills and stay updated with the latest trends in the investment sphere. We believe that our fusion of human and artificial intelligence creates optimal conditions for achieving successful results in financial markets.

Idea

Lately, artificial intelligence has ceased to be something fantastical and is increasingly acquiring concrete applications.

Automation of production processes, sorting packages in warehouses, car management, generation of graphics, text, music, and simply interacting with users—many of these tasks that now help people become more free have become commonplace today.

New technologies have also made their way into the world of finance. The role of artificial intelligence in trading is to relieve the average trader of routine analysis and identify potentially profitable deals.

One advantage of computer-based AI over humans is the speed of data processing and, consequently, the number of profitable trades identified.

At this stage, our developed software allows us to perform analytical tasks, leaving the specialist with the opportunity for a final review of the transaction and the decision-making process.

However, AI is capable of more than that. We are actively developing next-generation algorithms that will allow our software to self-learn with minimal human intervention.

Our next goal is to fully entrust the execution of trading deals to AI, leaving humans with only intermediate control over operations and the ability to make adjustments to the learning process. This will lead to even greater scalability of our business and enable us to expand our investment pools for larger volumes, making our clients even happier.

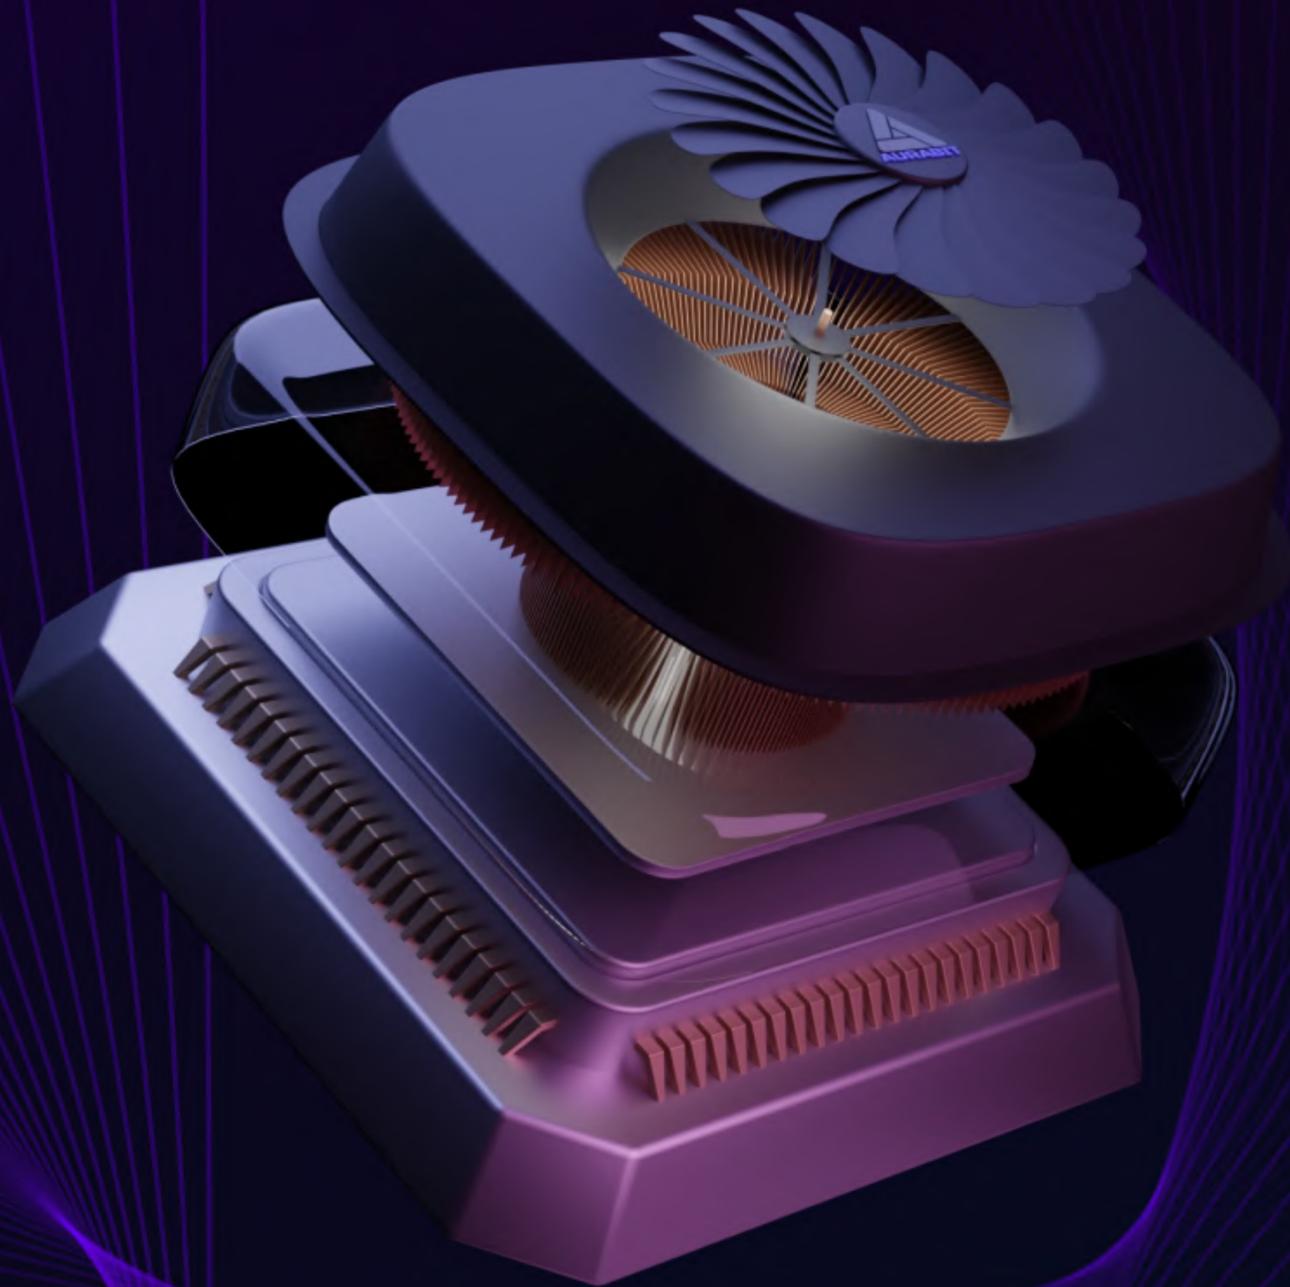

Business model

Aurabit utilizes corporate resources, institutional funds, and online investors' capital to trade on financial markets.

The company's marketing takes into account the interests of all parties, ensuring that the client sees the final profit in their wallet after all settlements have been made.

To ensure a stable and reliable income, we direct investors' funds into individually formed pools (exchange accounts) for each client, which are managed through the decentralized Aurabit management system. As a result, the money of each of our clients and their profits are stored separately, ensuring the targeted use of client funds.

Technologies

Cutting-edge technology is at the heart of everything we do. We pride ourselves on staying at the forefront of innovation, from software to hardware, to provide our clients with the most advanced and effective investment solutions.

Advanced Software Solutions: At Aurabit, we harness the power of the latest software technologies to analyze financial markets, predict trends, and execute trades with unparalleled precision. Our proprietary algorithms and machine learning models continuously adapt to changing market conditions, ensuring that we are always one step ahead.

Artificial Intelligence: Our use of artificial intelligence (AI) is a cornerstone of our success. AI enables us to process vast amounts of data in real-time, helping us identify investment opportunities and manage risk more effectively.

Our AI-driven approach allows us to make informed decisions swiftly, providing a competitive edge in today's fast-paced financial markets.

Cutting-Edge Hardware Infrastructure: To support our data-intensive operations, we invest in state-of-the-art hardware infrastructure. Our high-performance servers and network architecture ensure minimal latency and maximum reliability, enabling us to execute trades swiftly and securely.

Data Analytics: Data is the lifeblood of our operations. We employ advanced data analytics techniques to extract valuable insights from market data, helping us make informed investment decisions. Our data-driven approach allows us to identify emerging market trends and seize opportunities as they arise.

Cybersecurity

With the ever-present threat of cyberattacks, we prioritize the security of our clients' assets. Our robust cybersecurity measures, including encryption, intrusion detection systems, and regular security audits, ensure that our clients' investments are safe and protected.

Continuous Innovation

In the world of finance and technology, innovation is constant. We are committed to staying ahead of the curve by continuously exploring emerging technologies such as blockchain, quantum computing, and automation to further enhance our services and deliver even greater value to our clients.

Built-in wallet

Accumulate profits from your investments, replenish, withdraw, reinvest from the built-in wallet in Aurabit.

Activate the currencies you need and make transactions quickly and safely.

Instant payments

Instant payments speed up all business processes Aurabit

Pro +	\$2500 - \$5000	40 days	2.5 %	+
Exclusive +	\$5000 - \$100000	40 days	3 %	+

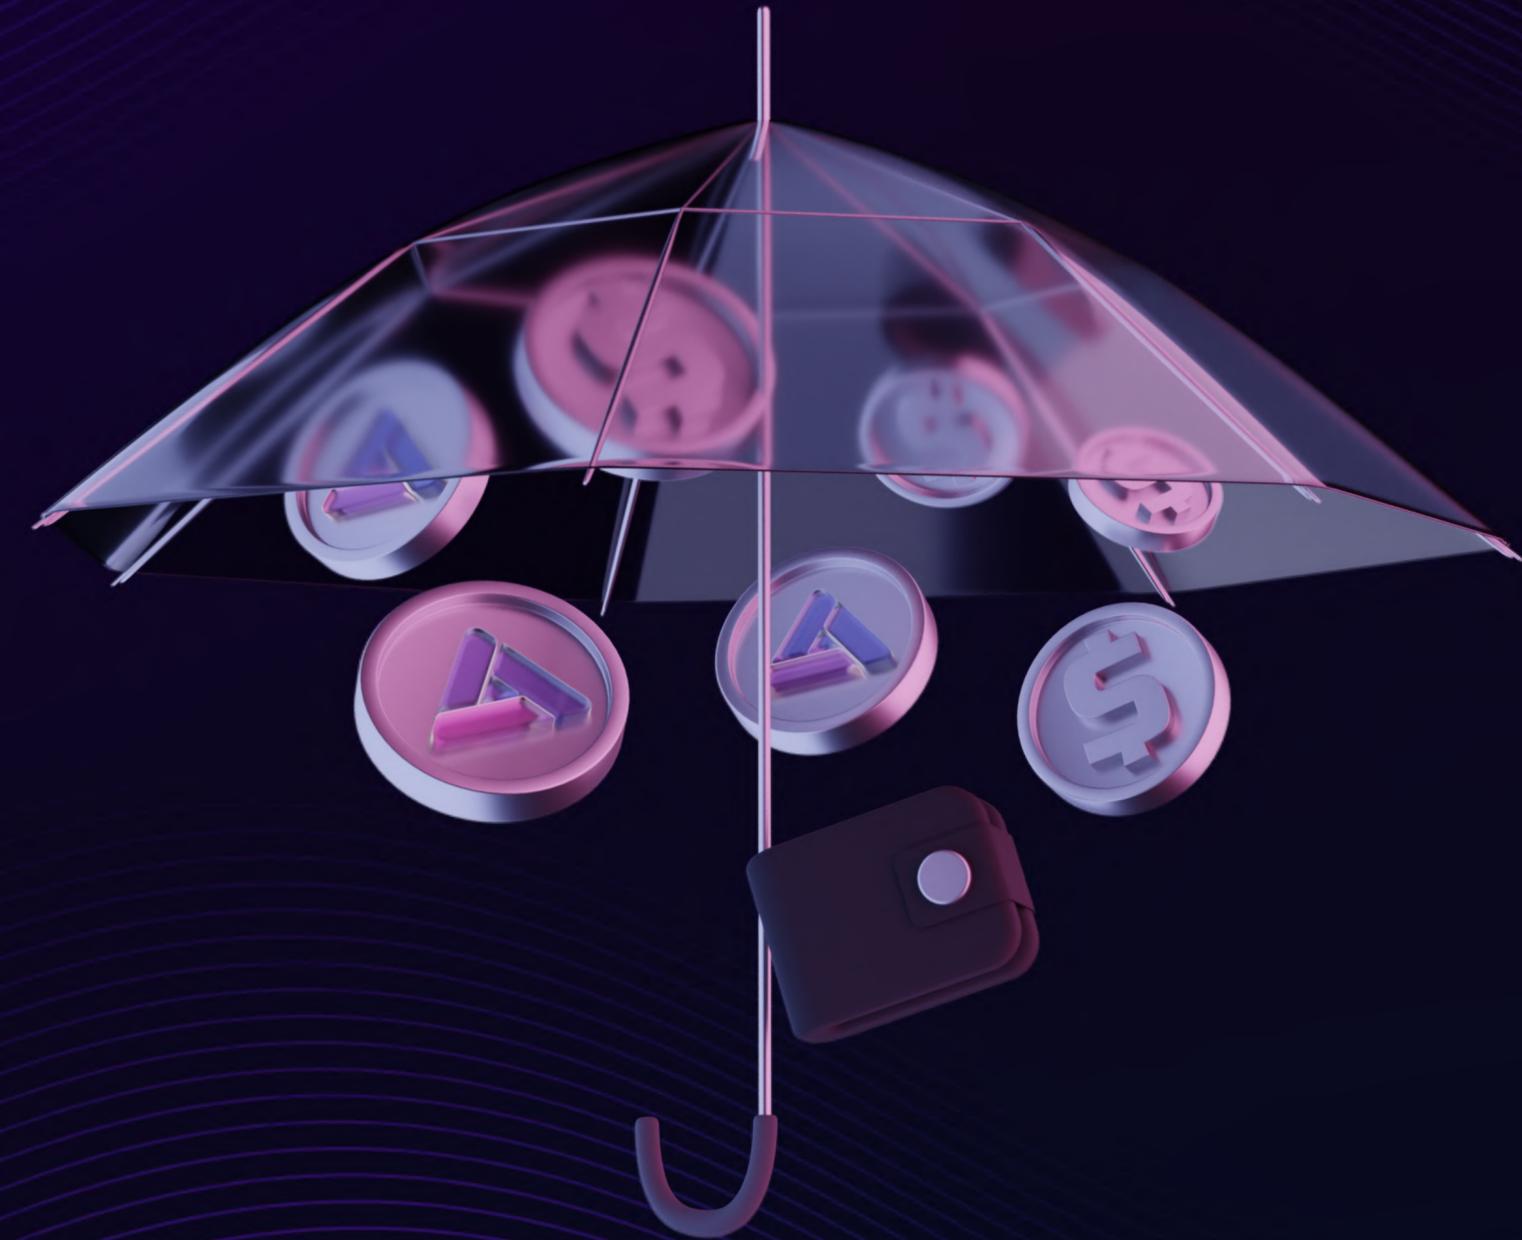

Aura-insurance

Despite the fact that our trading strategies and proprietary technologies allow us to make a significantly larger number of profitable trades compared to unprofitable ones, we are always aware of the risks that may arise during the trading process

That is why we have developed our own insurance fund "Aura-Insurance",

The fund constantly accumulates part of the company's profits and serves as a safety net in case some transactions lead to various losses.

Our agreements with clients are the company's most valuable asset and determine our reputation. We take responsibility for covering any losing trades from the Aaur-Insurance fund to ensure that our clients receive the expected return on their investment.

Open statistics

Track live company statistics, watch our development or become part of our driving force

The number of partners, investors, the amount of the insurance fund, the inflow and outflow of funds, the number of transactions, profitability and many other indicators are available in your personal account
